PostgreSQL 16

Tabellen: 5 · Sequenzen: 5 · Primärschlüssel: 5 · Fremdschlüssel: 3 ·

Einzigartigkeits-Constraints: 3 · Checks: 2

Tabellen im Detail

events

Zweck: Stammtabelle für gefundene Veranstaltungen (inkl. Metadaten aus dem Scraping).

Spalten:

| | | Not | | |
|-------------------|-------------|------|------------------------------|-------------------------------------|
| Spalte | Тур | Null | Default | Hinweis |
| id | integ er | ja | nextval('events_id_ seq') | Primärschlüssel |
| title | text | ja | | |
| date | text | ja | | Originaltext (nicht normalisiert) |
| address | text | ja | | |
| source | text | ja | | Quelle/URL oder Herkunftsbezeichner |
| trusted | bool ean | nein | false | Vertrauenswürdige Quelle |
| workshops | json b | nein | | Strukturierte Workshop-Daten |
| party | json b | nein | | Strukturierte Party-Daten |
| recurrence | text | nein | | Freitext zum Wiederholungsmuster |
| time | text | nein | '20:00' | Uhrzeit (Freitext) |
| venue_name | text | nein | | |
| dance_styles | json b | nein | | Liste/Stichworte der Tanzstile |
| venue_type | text | nein | 'Unspecified' | |
| workshop_da te | text | nein | | |
| workshop_ti me | text | nein | | |
| party_date | text | nein | | |
| party_time | text | nein | | |

| Spalte | Тур | Not Null | Default | Hinweis |
|-----------------------|-------------------|-------------|---------|---|
| timestamp | time stam p | nein | now() | Einfügezeitpunkt |
| city | text | nein | | Stadt (falls extrahiert) |
| recurring_pat tern | text | nein | | Menschlich lesbares Wiederholungsmuster |
| original_even t_id | integ er | nein | | Referenz auf Ursprungs-Event (ohne FK-Constraint) |

Schlüssel & Constraints:

- Primärschlüssel: events_pkey (id)
- NOT NULL-Spalten: id, title, date, address, source

Verweise auf events:

- votes.event_id → events.id
- venue_votes.event_id → events.id
- event_dates.event_id → events.id (ON DELETE CASCADE)

Sequenz: events_id_seq → events.id

votes

Zweck: Community-Votes, ob ein Event existiert oder nicht, inkl. abgeleiteter Jahr/Woche.

Spalten:

| | | Not | | |
|--------------|---------------|------|-------------------------|----------------------------------|
| Spalte | Тур | Null | Default | Hinweis |
| id | integer | ja | nextval('votes_id_seq') | Primärschlüssel |
| event_i d | integer | nein | | FK → events(id) |
| type | text | ja | | CHECK: 'exists' oder 'notexists' |
| date | timesta mp | ja | | Zeitpunkt des Votes |
| user_id | text | nein | | |
| year | integer | nein | GENERATED ALWAYS | aus date (EXTRACT year) |
| week | integer | nein | GENERATED ALWAYS | aus date (EXTRACT week) |

Schlüssel & Constraints:

- Primärschlüssel: votes_pkey (id)
- NOT NULL-Spalten: id, type, date
- Eindeutig: unique_vote_per_user_event_week (event_id, user_id, year, week)
- Check: votes_type_check (type ∈ {'exists', 'notexists'})
- FK: votes_event_id_fkey (event_id → events.id)

Sequenz: votes_id_seq → votes.id

venue_votes

Zweck: Community-Votes zur Location-Art eines Events (indoor/outdoor).

Spalten:

| | | Not | | |
|--------------|-------------|------|-------------------------------|--------------------------------|
| Spalte | Тур | Null | Default | Hinweis |
| id | integ er | ja | nextval('venue_votes_id_seq') | Primärschlüssel |
| event_i d | integ er | nein | | FK → events(id) |
| type | text | ja | | CHECK: 'indoor' oder 'outdoor' |
| date | text | ja | | Datum als Text |
| user_id | text | nein | | |

Schlüssel & Constraints:

- Primärschlüssel: venue_votes_pkey (id)
- NOT NULL-Spalten: id, type, date
- Check: venue_votes_type_check (type ∈ {'indoor', 'outdoor'})
- FK: venue_votes_event_id_fkey (event_id → events.id)

Sequenz: venue_votes_id_seq → venue_votes.id

event_dates

Zweck: Normalisierte einzelne Veranstaltungstage/Uhrzeiten pro Event.

Spalten:

| | | Not | | |
|--------|-----|------|---------|---------|
| Spalte | Тур | Null | Default | Hinweis |

| Spalte | Тур | Not Null | Default | Hinweis |
|----------------|---------------|-------------|--------------------------------|---------------------------------------|
| id | intege r | ja | nextval('event_dates_id_seq') | Primärschlüssel |
| event_id | intege r | nein | | FK → events(id), ON DELETE CASCADE |
| event_d ate | date | ja | | |
| event_ti me | time | nein | | ohne Zeitzone |
| is_prima ry | boole an | nein | false | Kennzeichnung Haupttermin |
| created_ at | timest amp | nein | now() | |

Schlüssel & Constraints:

- Primärschlüssel: event_dates_pkey (id)
- NOT NULL-Spalten: id, event_date
- Eindeutig: event_dates_event_id_event_date_key (event_id, event_date)
- FK: event_dates_event_id_fkey (event_id → events.id) ON DELETE CASCADE

Sequenz: event_dates_id_seq → event_dates.id

scraped_urls

Zweck: Verwaltungs-/Log-Tabelle für Crawling/Scraping.

Spalten:

| | | Not | | |
|-----------------|---------------|------|--------------------------------|----------------------------------|
| Spalte | Тур | Null | Default | Hinweis |
| id | intege r | ja | nextval('scraped_urls_id_seq') | Primärschlüssel |
| url | text | ja | | Eindeutig |
| scraped_a t | timest amp | nein | now() | Zeitpunkt des letzten Scrapes |
| success | boole an | nein | false | Erfolg des letzten Durchlaufs |
| event_cou nt | intege r | nein | 0 | Anzahl gefundener Events |
| last_updat | timest | nein | now() | Letzte |

| | | Not | | |
|--------|-----|------|---------|--------------------------|
| Spalte | Тур | Null | Default | Hinweis |
| ed | amp | | | Metadaten-Aktualisierung |

Schlüssel & Constraints:

Primärschlüssel: scraped_urls_pkey (id)

• NOT NULL-Spalten: id, url

• Eindeutig: scraped_urls_url_key (url)

Sequenz: scraped_urls_id_seq → scraped_urls.id

Sequenzen

- event_dates_id_seq → event_dates.id (OWNED BY)
- events_id_seq → events.id (OWNED BY)
- scraped_urls_id_seq → scraped_urls.id (OWNED BY)
- venue_votes_id_seq → venue_votes.id (OWNED BY)
- votes_id_seq → votes.id (OWNED BY)

Beziehungen zusammengefasst

- events 1→n votes (FK: votes.event_id)
- events 1→n venue_votes (FK: venue_votes.event_id)
- events 1→n event_dates (FK: event_dates.event_id, ON DELETE CASCADE)
